

Demographics

Overview

The state's July 1, 2002 population was estimated to be 2,338,761 persons, increasing 1.9% from 2001. Although the state continues to experience net in-migration, natural increase accounts for the majority of the state's population growth. Utah's population growth is characterized by a high birth rate and low death rate, both at record levels for the state in 2002.

According to Census 2000, Utah's population increased 29.6% from 1990 to 2000, growing twice as fast as the U.S. over the decade. Utah ranked fourth among states in population growth from 1990 to 2000. Utah also continues to have a distinctive demographic profile. The state's population is younger, women tend to have more children, people on average live in larger households, and people tend to survive to older ages in comparison to other states.

2002 State and County Population Estimates

The Utah Population Estimates Committee recently released July 1, 2002 population estimates for the State of Utah and its counties. The state's population reached 2,338,761 in 2002, a year over increase of 42,790 persons, or 1.9%. The state experienced its twelfth straight year of net in-migration in 2002, as well as record setting years for births and natural increase (births minus deaths).

Utah's counties experienced varied growth rates in 2002. The most rapid growth in Utah occurred in counties within or adjacent to the northern metropolitan region, and in the southwestern portion of the state. The counties that are estimated to have grown faster than the state rate (1.9%) over the past year include, Wasatch County, with the highest growth rate of 5.6%, followed by Washington (5.3%), Tooele (4.0%), Rich (3.4%), Utah (3.2%), Summit (3.1%), Cache (2.2%), and Davis (2.2%).

Several counties experienced population decrease from 2001 to 2002. The majority of these counties are located in the southern and eastern areas of the state and they include Daggett (-3.0%), Kane (-1.3%), Garfield (-0.7%), Uintah (-0.2%), and Wayne (-0.2%).

Components of Population Change

Annual changes in population are comprised of two components: natural increase and net migration. Natural increase is the number of births minus the number of deaths. Annual births were at a record level in 2002 at 48,041, as well as annual deaths at 12,662. Since 1990, over 60% of the state's population growth has resulted from natural increase.

Net migration is the second component of population change. For a given period, net migration is in-migration minus out-migration, or the number of people moving into a place minus the number of people moving out. Total population in the state increased by 42,790 persons from 2001 to 2002. Natural increase accounted for 35,379 persons, or 83%, while net in-migration accounted for 7,411 persons, or 17% of the total population increase. In 2002, Utah experienced net in-migration for the twelfth year in a row.

Fluctuations in the annual amount of natural increase may result from changes in the size, age structure, and vital statistics (fertility and mortality) of the population. Total fertility rate is the number of births a woman would have during her lifetime if, at each year of age, she

experienced the birth rate occurring for that specific year. Utah's fertility rate, 2.68 in 2002, continues to be the highest among states nationwide.

According to the National Center for Health Statistics, life expectancy has increased for both men and women in Utah and the U.S. from 1970 through 1990, although Utah life expectancy has been consistently higher than the national average. Life expectancy in Utah has risen from 72.9 in 1970 to 77.7 in 1990, compared to 70.8 in 1970 and 75.4 in 1990 for the U.S.

Utah's Young Population

Utah's rate of population growth continues to be about twice that of the nation. The state's population is younger, women tend to have more children, people on average live in larger households, and people tend to survive to older ages in comparison to other states. All these factors lead to an age structure that is quite unique among states. According to Census 2000, Utah has the lowest median age (27.1) among states, the highest share of its total population is in the preschool age group (9.4%), and the second highest share of its total population is in the school age group (22.8%). At the same time, the state has one of the smallest shares of its population in the working age group (59.3%). Only Alaska (5.7%) has a smaller share of its total population in the 65 and older age group than does Utah (8.5%).

Utah continues to have the youngest population in the country, ranking first in the percent of the population under 18 (32.2%) in 2000. Utah County had the youngest population of any county in the nation (with a population of 100,000 or more), with a median age of 23.3. The City of Provo, with a median age of 22.9, had the lowest median age of any city in the nation (with a population of 100,000 or more) in 2000.

Another way to look at the age structure of a population is by examining the Dependency Ratio, which is a calculation of the number of non-working age persons (under 18 and 65 and over) per 100 persons of working age (18 to 64). Based on Census 2000 results, the total dependency ratio for Utah was 68.6, compared to 72.2 in 1999. Utah continues to have one of the highest dependency ratios among states, just behind South Dakota (70.0).

Census 2000 Population Counts

On April 1, 2000, the U.S. Census Bureau conducted the 22nd national census. In Census 2000, over 281 million people were counted in the U.S., representing an increase of 33 million people, or 13.2% from 1990. This ten-year population increase was the largest in American history, with every state in the country experiencing growth, although to varying degrees. Population growth varied significantly by region, with the West and South leading the nation, growing 19.7% and 17.3% respectively.

Utah's population reached 2,233,169 on April 1, 2000, increasing by 510,319 people from 1990. This placed Utah fourth among states in population growth over the ten-year period. Nevada grew the fastest at 66.3%, followed by Arizona (40.0%), Colorado (30.6%), Utah (29.6%), and Idaho (28.5%).

Salt Lake County continued to be the state's largest county in the state, with a 2000 population of 898,387, followed by Utah (368,536), Davis (238,994), Weber (196,533), and Cache (91,391). Salt Lake City was the largest city in the state in 2000, with a population of 181,743,

followed by West Valley City (108,896), Provo (105,166), Sandy (88,418), and Orem (84,324).

All of Utah's 29 counties experienced population growth in the 1990s, ranging from a high of 91.6% in Summit County, to a low of 1.0% in Carbon County. Five of the state's fastest growing counties over the decade form a ring of high growth around the northern metropolitan counties. These counties include Summit (91.6%), Tooele (53.1%), Wasatch (50.8%), Juab (41.6%), and Sanpete (40.0%). Southern Utah's rapid growth continued with Washington (86.1%) and Iron (62.5%) counties, the second and third fastest growing counties in the state, growing more than twice as fast the state in the 1990s.

The City of Draper, in Salt Lake County, led the way among the state's largest cities (greater than 9,000). Draper more than tripled in size from 1990 to 2000, increasing 18,000 people, or 248%. Several other of the state's largest cities, all located along the Wasatch Front, doubled in size over the decade, including South Jordan (141%), Lehi (125%), Riverton (122%), and Syracuse (102%).

Census 2000 Household and Family Characteristics

Utah continued to have the largest households in the nation, with 3.13 persons per household in 2000, compared to 2.59 nationally. The number of households in the state reached 701,281 in 2000, a 31% increase from 1990. Utah also continued to have the largest families in 2000, with 3.57 persons per family, compared to 3.14 nationally.

Over the past several decades, the composition of households in Utah has changed significantly. The number of family households increased by 30%. However, the proportion of households that are designated family households remained at 76%. In 2000, only 35% of households in Utah were composed of married couples with "own children" under 18, compared to 42% in 1980. The number of married couples, with or without children, has declined from 69% in 1980 to 63% in 2000. Despite these trends, Utah ranked first in the nation in 2000 in the percent of family households (76%) and percent of married couple families (63%).

Census 2000 State and County Race and Hispanic Origin Counts

As a result of the revised standards for collecting data on race and ethnicity issued by the U.S. Office of Management and Budget in 1997, Census 2000 was the first national census in which respondents were allowed to select more than one race.¹ The six race categories for Census 2000 include, White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, and Some Other Race. Respondents that selected more than one race are included in the "Two or More Race" category. The two categories for ethnicity include: Hispanic or Latino, or Not Hispanic or Latino.

While allowing respondents to report more than one race may provide a more accurate representation of the racial diversity of the country, it also means that data on race from Census 2000 are not directly comparable with the data from previous censuses. Another factor affecting 1990-2000 comparability is the splitting of the 1990 Asian and Pacific Islander

category into two separate categories in 2000. The 2000 categories include (1) Asian, and (2) Native Hawaiian and Other Pacific Islander.

The majority of Utahns (97.9%) selected only one race in 2000. Among those that selected a single race, the majority were White (89.2%), followed by Asian (1.7%), American Indian and Alaska Native (1.3%), Black or African American (0.8%), Native Hawaiian or Other Pacific Islander (0.7%), and Some Other Race (4.2%).

The Hispanic population in Utah increased 138%, from 84,597 in 1990 to 201,559 in 2000. Hispanics accounted for 9% of the state's population in 2000, compared to 4.9% in 1990.

Among Utah's counties, Summit County had the fastest growing Hispanic population (638%) over the decade, followed by Washington (448%), Piute (327%), Garfield (289%), and Iron (262%). Carbon County was the only county that experienced a decrease in Hispanics over the decade (-6.7%). Hispanics made up 12.6% of the total population in Weber County in 2000, the largest percentage among all counties, followed by Salt Lake (11.9%), Carbon (10.3%), Tooele (10.3%), and Summit (8.1%).

¹ According to the U.S. Census Bureau, the Some Other Race Category was included on the Census 2000 questionnaire for respondents who were unable to identify with the five other race categories.

Notes:

- 1) Totals may not add due to rounding.
- 2) AARC is the Average Annual Rate of Change
- 3) The MCDs are multi-county districts and they are divided as follows: Bear River MCD: Box Elder, Cache, and Rich counties; Central MCD: Juab, Millard, Piute, Sanpete, Sevier, and Wayne counties; Mountainland MCD: Summit, Utah, and Wasatch counties; Southeastern MCD: Carbon, Emery, Grand, and San Juan counties; Southwestern MCD: Beaver, Garfield, Iron, Kane, and Washington counties; Uintah Basin MCD: Daggett, Duchesne, and Uintah counties; Wasatch Front MCD: Davis, Morgan, Salt Lake, Tooele, and Weber counties.

Note: As a result of the revised standards for collecting data on race and ethnicity used by the U.S. Office of Management and Budget in 1997, Census 2000 was the first national census in which respondents were allowed to select more than one race. Respondents that selected more than one race in 2000 are included in the "Two or More Races" category. Race data from Census 2000 are not directly comparable with data from the 1990 Census and previous censuses.

Note: The IRS data are a migration data product, an annual indicator of migration flows among the states. Although not directly significant, the state of fiscal status provides the best indication of the net flow of migration, while the IRS data provide the only source of gross flows and of the annual origins and destinations of migration.

AARC = Average Annual Rate of Change

Note: The Utah Population Estimates Committee provided April 1, 2000 population estimates for the following areas: Hanksville, 240; resulting Balance of Wayne County, 986; Hooper, 4,081; resulting Balance of Weber County, 13,694; Leeds, 590; resulting Balance of Washington County, 5,815; Holladay, 19,246; Taylorsville, 58,764; and West Jordan, 78,714; resulting Balance of Salt Lake County, 193,254. In the case of Washington County and Salt Lake County, only the annexation increment impacts the Balance of County figure. The annexation increment for Leeds, is 43, for Holladay is 5,687, for Taylorsville is 1,325, and for West Jordan is 10,378.
